/*****************************************************************************************
   Slotcar Race Controller for PCLapCounter Software

   (C) Copyright 2016 el.Dude - www.eldude.nl

   Arduino MEGA 2560 based slotcar race controller. Capture start/finish signals,
   controls the power relays as well as any signal LEDs and manages external buttons.

   See http://pclapcounter.be/arduino.html for the input/output protocol.
   Minimum PC Lap Counter version: 5.40

   Author: Gabriel Inäbnit
   Date  : 2016-10-14

   TODO:
   - aborting start/restart is bogus
   - void startLights(byte pattern): get them patterns figured out

   Revision History
   ____________ ____________________ ____________________________________________________
   2016-10-31 Gabriel Inäbnit      Race Clock - Race Finished status (RC2) PCLC v5.40
   2016-10-28 Gabriel Inäbnit      Start/Finish lights on/off/blink depending race status
   2016-10-25 Gabriel Inäbnit      Removed false start init button - no longer needed
   2016-10-24 Gabriel Inäbnit      Fix false start GO command with HW false start enabled
   2016-10-22 Gabriel Inäbnit      HW false start enable/disable, penalty, reset
   2016-10-21 Gabriel Inäbnit      false start detection and penalty procedure
   2016-10-18 Gabriel Inäbnit      external buttons handling added
   2016-10-14 Gabriel Inäbnit      initial version
