/***************************************************************************************
   Slotcar Race Controller for PCLapCounter Software

   (C) Copyright 2016 el.Dude - www.eldude.nl

   Arduino MEGA 2560 based slotcar race controller. Capture start/finish signals,
   controls the power relays as well as any signal LEDs and manages external buttons.

   See http://pclapcounter.be/arduino.html for the input/output protocol.

   Author: Gabriel Inäbnit
   Date  : 2016-10-14
